

## PETFOOD SOLUTIONS

Moisture, Protein, and Fat Analysis for Pet Treats, Dry Petfood, and Wet Petfood

ANALYTICS BEYOND MEASURE

FOSS petfood solutions provide rapid and reliable measurements of crucial parameters, in the lab, and in production. Instruments and software allow you to leverage real-time production data and take action that saves costly rework and the wasting of valuable resources.

In petfood production, optimal use of raw materials and a tight control throughout production can lead to considerable cost savings. FOSS solutions are designed to tightly control valuable parameters such as moisture, protein and fat. Our full range of pet food analysis solutions cover both dry and wet food production from measurement of incoming raw materials to the final product.

FOSS NIR solutions include instrumentation, calibrations, calibration development software, and instrument networking software as well as instrumentation for wet chemistry reference methods. All solutions are supported by our global sales and service organization.

## NIRS™ DS2500

The NIRS™ DS2500 is a highly versatile solution that allows you to reuse existing calibration data on a new high performance wavelength range of 400 to 2500 nm. The optimal choice when you do not want to compromise with performance and need full flexibility in choice of products and parameters.

### Sample Type

Dry and wet petfood, pet treats, animal by products, fats and oils, vegetable protein meal

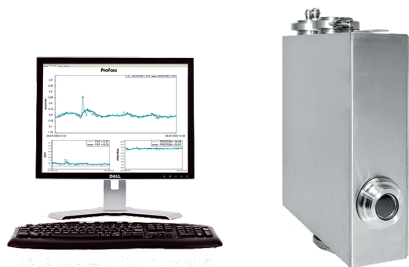

## FoodScan™ 2

The FoodScan™ 2 analyzer is the new gold standard for fast, accurate and easy analysis of meat and processed meat products. It can be used in all stages of production - from checking incoming raw material to final product control.

### Sample Type

Meat, ground meat, meat mixes, other uncooked meat products.

## ProFoss™

The ProFoss in-line analyzer offers continuous measurements of petfood parameters, such as moisture, protein and fat, directly in the processing line using high resolution technology.

### Sample Type

Wet and dry petfood ingredients, meat slurries, finished wet and dry petfood

### FOSS Digital Services

#### FossConnect

Configure, manage and monitor your instrument network

#### FossAssure

Ensure instrument uptime with proactive performance reports

#### FossAssure Pro

FOSS experts monitor instrument and calibration performance
